## Wood becomes fluid

Oleandra is a cabinet defined by a wooden camouflage closure that, thanks to its very particular shape, gives softness to the structure.

The cabinet is presented in two finishes: wood - available in different essences - or with a geometric patchwork design that interweaves light and dark woods.

It rests on a bronze base and on the inside it has glass shelves with bronze profiles, LED lighting, drawers in glossy africa frisé walnut and leather placemats.

Oleandra is available in the high or low version and with drawers covered in leather or bronze.
